

PGR Introduces Free Mobile Search for Agent Websites

All PGR websites now have a **free** mobile search that can be used on any mobile device that has a web browser. This search option is optimized for the small form-factor of these devices and simplified for quicker and easier use by mobile users.

Here's how it works:

1. A mobile user opens their web browser and goes to your website address
2. Our website platform recognizes that the user is on a mobile web browser and automatically redirects them to the mobile search
3. The user enters their search criteria and clicks the Search button.
4. All matching listings (including IDX) are shown in the search results for the user just as they would on your regular website
5. The user can click to Call you for additional info or questions

Search Options Available:

- City or Zip
- Number of Bedroom or Bathrooms
- Price Range
- Property Type
- Search by address (returns surrounding area listings)
- MLS Number
- Saved Searches and Favorites (prompts the user to create a Home Finder account that is accessible from your website or mobile web browser and vice-versa)

Coming Soon: Option to view full (non-mobile version) website

The mobile search is accessible by your default web address or a forwarded or hosted custom domain. You can even direct buyers to your Smart List domains or direct URLs to listings to pull up the mobile detail page for a specific property.

“Agents Only”

You can also access the mobile version of the Clients section of your website intranet. Login to your mobile intranet to view and accept pending website leads, view recent client activity or retrieve client info.
